

Agilent 55282A Flatness Accessory Kit

Data Sheet

Basic Equipment

Agilent 5530 Laser Calibration System
Agilent 55281A Angular Optics Kit
Agilent 55282A Flatness Accessory Kit

The 55282A flatness accessory kit together with the 55281A angular optics kit makes flatness and way straightness measurements. Flatness measurements are a series of angular measurements made along a pattern of lines. These measurements document and analyze in three dimensions any flat surface, such as a surface plate or machine bed. Way straightness measurements are a series of angular measurements made in a single line to document and analyze the straightness of solid objects, such as machine tool ways and master straight edges.

The following specifications assume Agilent 5530 Laser Calibration System is in use, and the temperature of all optical components is stabilized in the range 15° C to 25° C. Values do not include effects of surface cleanliness or operator positioning repeatability.

Maximum range

Up to 15 m (50 ft)

Accuracy

±0.2% of displayed value

Foot spacing dimension

Resolution (per step)

50.8 mm (2 in)

0.002 μm (0.06 μin)

101.6 mm (4 in)

0.003 μm (0.12 μin)

152.4 mm (6 in)

0.005 μm (0.18 μin)

Reference plane accuracy

The uncertainty of a surface plate flatness measurement is bounded by two parallel planes separated by the values below:

Metric units mode 0.03 (M)² μm where M = length of the surface diagonal in meters

English units mode 0.12 (F)² μin where F = length of the surface diagonal in feet

Lateral offset and flatness range

The combination of lateral offset and maximum flatness deviation must not displace the reflector more than ±1.0 mm from the beam path in any direction.

Components included in the 55282A flatness accessory kit

Description	Quantity
50.8 mm (2 in) base	1
101.6 mm (4 in) base	1
152.4 mm (6 in) base	1
Hardware kit with hex keys	1 set
Flatness mirrors	2
